TRADEFLOW® PRODUCT MANAGEMENT CENTRE

Solutions for Managing Product/Sku Compliance

Tradeflow's Product Management Centre is a web-based tool for importers and exporters to store information about the products that they buy and sell along with important cross border attributes.

Cross-Border Product Attributes

- Classification numbers
- Duty rates
- Packaging information
- Multi-lingual descriptions
- Product Images
- Partner Government Agency requirements

Tradeflow's Product Management Centre acts as the central repository for a company's global product classification compliance process.

Product Management Centre Functionality

- Flexible and powerful searching and reporting capabilities
- Collaboration across departments or with external logistics providers and customs brokers
- Use interactive work queues to assign products to various members of the supply chain
- Upload existing product lists
- Extract for reporting purposes

Tradeflow's Product Management Centre is integrated with the Trade Reference Centre, our global content service, giving access to customs tariffs for about 120 countries covering over 90% of all international trade

Trade Reference Centre Integration

- Classify products for Harmonized Tariff Code, Export Control Numbers and US Export Schedule B
- Evaluate current import and export restrictions
- Perform landed cost estimates between multiple countries in minutes

A secure system, Tradeflow gives you greater control and helps you manage your products and minimize the risk of errors that could occur in the logistics process.

Security and Control

- Share controlled access with your vendors, customers, and service providers
- Comprehensive audit trail that shows detailed historical changes by user
- Integrated with Expeditors' customs declaration processing systems
- Tradeflow can integrate electronically with other service providers
